SURVEY ON **PARENTS** FOR THE **ONLINE SAFETY OF CHILDREN**

The survey was conducted online during the months November-December 2020 and involved 1750 parents. The majority of participants were women (84%) aged 40-49 years by 56%, followed by 31% participants aged 30-39 years. The age of the children of the participants is from 9 to 12 years by 40% and from 6-8 years by 23%.

64% worries about the time children spend online

48% uses parental control tools on a permanent or occasional basis

24% is rarely informed about the dangers of the digital world

16% never discusses online safety issues

11% does not know with whom the child is talking

According to the results of the research, parents are mainly concerned about:

- the possibility of the child adopting an addictive behaviour after the pandemic
- how to restore the balance between children's real and digital lives
- children's new online habits such as chatting with other users who are not necessarily known to them in real life, engaging in online gaming and social networks.
